PLANFORGE - RESIDENTIAL LAYOUT STUDIO

From project brief to construction-ready layout

Define the room program, run physics simulations, verify candidate layouts against nine design rules, and export a typed contract toward the Revit bridge.

10 pipeline stages9 verification checksLive Revit contract push

WHERE TO START

Set up the program brief first

Open **Program Setup** to confirm the room list, target areas, adjacency preferences, and RROW configuration before running any generation.

WHAT PLANFORGE DOES

Generation → Verification → Export

- Physics simulation places rooms as weighted bubbles inside the buildable envelope.
- Captures are processed through Voronoi clipping, hallway injection, and UV negotiation.
- Nine verification checks cull layouts that fail frontage, access, deficiency, or geometry rules.
- Accepted layouts move to construction output: walls, doors, windows, and a typed contract.
- Contracts are pushed to the Revit HTTP endpoint for preview and apply.

PIPELINE STAGES

Move through the workflow in order

Each stage transforms the previous output and answers one decision question.

101 · Program Setup

Define rooms, target areas, tags, adjacency scores, and blocker rules that will shape every candidate.

202 · Site And Lot

Set lot segments, setbacks, and RROW lines. Review the buildable envelope and frontage constraint.

303 · Generation

Review the seed positions and bias profiles that initialize each simulation run.

404 · Simulation

Run physics bubble engines with heatmap feedback until passing layout captures are collected.

505 · Processing

Transform captures through Voronoi clipping, hallway injection, UV edge negotiation, and residual absorption.

606 · Verification

Check all nine layout rules: deficiency, aspect ratio, access, critical touch, frontage, slivers, and overlaps.

707 · Candidate Gallery

Compare verified layouts across the run and shortlist the strongest candidates for handoff.

808 · Construction Output

Review the extracted wall segments, door placements, and window placements ready for export.

909 · Output Viewer

Inspect the full layout contract and confirm it is ready to push to the Revit endpoint.

CANDIDATE GALLERY

Compare accepted layouts and keep the strongest one in view

Use this stage to compare accepted layouts side by side and decide which one deserves to move forward. There are currently 2 candidates available for review.

2 candidates ready for comparison

NEXT ACTION
Compare the top candidates, focus on differences that matter, and keep the strongest layout in view for downstream handoff.
