

**MY 3D TEAM'S OUTPUT****~3,000** / month

3D modeling orders per month, sustained by the team I led at EMAPTA.

**LED A 3D MODELING TEAM****13** at once

Managed about 50 team members in total during my time at EMAPTA.

**CUSTOM AI HARNESSES****Development automation**

Connected AI assistants to project tools for code inspection, test runs, and development feedback.

RESUME • SELECTED WORK

NEILWINN PINEDA

3D PRODUCTION LEAD • DEVELOPER**PROFILE**

3D production leader and developer working primarily with Angular, TypeScript, Node.js, and MongoDB. Led high-volume modeling teams, delivered a production AppSheet ERP for design and construction, and built tools for labour pay, production workflows, and AI-assisted development.

PROFESSIONAL WORK

3D production, team leadership, and client software built alongside employed roles.

EXPERIENCE

EMAPTA

Mar 2025 – Mar 2026

3D Modeling Team Leader

- Led up to **13 modelers at once** and about 50 across the role. Managed assignments, training, quality review, deadlines, and client issues.
- Sustained roughly **3,000 modeling orders a month**.
- Built performance and order tracking tools that replaced manual data gathering and supported automated assignment decisions; developed SketchUp utilities.
- Worked around Google API limits by sending **only changes across 1,000+ fields** for live tracking and allocation, avoiding full dataset transfers.

Independent developer

2023 – present

Web and business systems · alongside employed roles

- **Interior design and construction:** delivered a production AppSheet ERP connecting leads and sales with design, tenders, construction, project tasks, and daily operations.
- **Construction supplier and contractor:** built labourer attendance and time tracking, daily wage and bonus calculations, and pay advance tracking.
- **Restaurant:** designed a customer menu reflecting the restaurant's visual identity.
- **US client:** built a commissioned Google Hangouts-style chat application.

SHORE360

Jan 2023 – Mar 2025

3D Modeling and Rendering

Produced architectural models and rendered scenes, prepared materials and presentation views, and handled revisions and scene cleanup for delivery.

Prodigal Developers

Jan 2022 – 2023

3D and Programming Intern

Created and prepared 3D models for games and contributed Unity programming during a one-year internship.

EDUCATION

BS Information Technology

Gordon College

Aug 2017 – Jun 2022

BA Culinary Arts

Bluespoon Culinaire

Aug 2016 – Jun 2017

BS Architecture · incomplete

Saint Louis University

Aug 2011 – Jun 2016

TECHNICAL SKILLS

Core software stack

Strongest stack

Angular, TypeScript, Node.js, and MongoDB for web applications and development tools.

Business systems

Production use · client and team tools

AppSheet, Google Sheets, Apps Script, Ruby, API integrations, webhooks. Project use of n8n and Zapier.

Additional web & data

Strong · React, Ionic & SQL used by 2022

React, Ionic, JavaScript, SQL, Express, HTML/CSS; Angular Material, Tailwind CSS, RxJS, Three.js.

Automation & testing

Strong · project use

Headless Chrome, Puppeteer, Playwright, Vitest, GitHub Actions, Git; PowerShell and winget.

3D modeling & rendering

Professional · 3D work since 2022

SketchUp, AutoCAD, V-Ray, Lumion, Enscape. Architectural production from 2023 to 2026.

Graphics & design

Strong · Adobe creative tools

Photoshop, Illustrator, Premiere Pro; Figma and Canva for interface, layout, and presentation work.

Engine & CAD development

Personal projects and prototypes

C++17, CMake, DirectX 11, C#/F.NET, Unity Editor tools, Revit API. Blender and Unreal Engine used as needed.

TECHNICAL WORK

Custom AI tools, software projects, and the technologies used to build them.

AI INTERACTION HARNESSES

Unity development harness

Built Node.js and C# Editor tools for code inspection, Editor status checks, selected Edit Mode tests, and Play Mode captures. The verifier rejects failed, incomplete, outdated, or source-mismatched test results.

Unity repository · private ↗

Revit bridge / PROTOTYPE

Built a local HTTP and Revit API connection so external tools can exchange structured project data with Revit.

Revit repository · private ↗

AI workflow design: layered project context, prompt refinement, tool connections, execution checks, and context and token budgeting.

SOFTWARE PROJECTS

PERSONAL PROJECT

PlanForge

Built an interface for exploring residential layouts: define room requirements, generate and compare candidates, review checks, and inspect construction output views.

Angular · TypeScript

PlanForge repository ↗

PERSONAL PROJECT

C++ graphics engine

Developed a graphics engine project to explore rendering, runtime structure, camera control, and input.

C++17 · DirectX 11 · CMake

Engine repository ↗

ACADEMIC CAPSTONE

Hardware store system

Built inventory, accounting, and employee timekeeping functions for a hardware store as the BS Information Technology capstone.

React · Ionic · MongoDB · SQL

PERSONAL PROJECT

UI template system

Created reusable interface components and a tool that turns custom HTML tags into static pages, with Angular and Next.js demonstrations.

TypeScript · Node.js · HTML/CSS

Template repository ↗
